

CASE STUDY

GYM AIR CONDITIONING

Panasonic

Air Options has been designing / installing and maintaining equipment in excess of 20 years and strives to provide industry leading products.

We were approached to design and install a package to improve temperature control to a Gym that had recently been refurbished, with the client wishing to further improve the experience for the customers by installing air conditioning systems throughout.

Timing and neatness was critical for this project as the site had already been refurbished to a very high standard and accurate marking out for supports / units and infrastructure was needed to minimise any making good / builders works redecoration. The Gym was also in use throughout the installation so a detailed program was needed to ensure areas could be safely worked in for our engineers and the safe use of the facilities by the clients during the installation.

The systems selected were high capacity ducted type units, all 1-1 split type units to allow for individual units to be operated to separate timer schedules and set points.

Finish and appearance was very important to the client and these ducted units were all fitted with bespoke supply air diffusers / plenums to make a feature of the installation as opposed to trying to discrete the installation away.

We opted to supply and install systems manufactured by Panasonic as these offered excellent build quality, are operating on the latest R32 refrigerant and a reputable / reliable product needed for the long term improvement investment.

Systems were supplied and installed to offer:

- ☐ Temperature Control Throughout
- ☐ Reliable and Reputable Manufacturer
- ☐ Latest R32 Refrigerant
- ☐ Even Airflow Distribution
- ☐ Feature Installation.

Building:	Single Storey Warehouse
Location:	Essex
Objectives:	Improve and Enhance User Comfort
Manufacturer:	Panasonic
Heating & Cooling:	YES
Refrigerant:	R32
Format:	Exposed With Bespoke Diffusers
Installation:	Phased During Normal Working Hours
Value:	>£15K
Timescale:	3 Weeks
